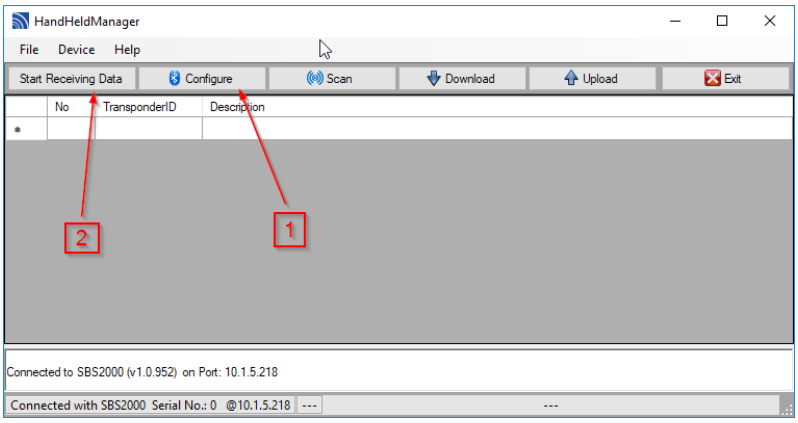
Base Station for sttID Bluetooth Devices
SBS-1010

- Base Station for use with sttID BluetoothLE devices SHT-2000, SHT-2020, SHT-9000
- USB Keyboard emulation (HID) mode
- USB CDC (serial) mode

With the sttID Base Station handhelds can be connected to a PC without any trouble of configuring Bluetooth at the PC. Even in power down mode and Bluetooth is off the PC sees a valid connection, because the base station handles connection and reconnection to the handheld. So e.g. the serial port still exists.

Software Tools



HandHeldManager can be used to setup hand held and base station.
